

DBCS Support

Double Byte Character Set Support

DBU software is already ‘soft coded’ to support local languages from around the world, but now has been enabled to also support **Double Byte Character Sets (DBCS)** languages which include Simplified and Traditional Chinese, Japanese, and Korean. *DBU* is the leading database utility in use by over 20,000 installations worldwide which include information technology departments in all industries operating IBM *i* systems. With *DBU*, analysts can research or edit field contents, reactivate deleted records and include these records for search functions, and create database maintenance applications.

“ProData continues to expand into international markets, and we are happy we can now support the Asian (DBCS) languages” said Allen Hartley, CEO and owner. “Every IBM *i* operation in the Asia Pacific region, no matter what industry, has a need to better access information in their native language. They can now look to ProData’s *DBU* as the solution of choice to access their data safely, while increasing their productivity.”

Plug-in to Compliance Today!

Team *DBU* up with *DBU Audit* to capture all IBM *i* or remote database adds, changes and deletes made using *DBU*. It’s the only way to track database modifications on remote systems.

Access and Integrate Your Remote Data!

DBU / RDB offers *DBU* access to remote databases like MySQL, Microsoft SQL Server, DB2, Microsoft Access, Oracle, and more! Use *DBU* to analyze and securely modify data on all your servers.

RDB Connect provides full SQL access to remote data from all System *i* applications. Easily access all your databases from an RPG or any System *i* applications. Easily access all your databases from an RPG or any high-level language program. Now, everything can be real-time!
